RISK FACTORS

The value of investments generally fluctuates in response to market conditions, as all investment considerations involve a risk element. A summary of the major risks that may significantly affect the Fund's performance, and should be considered as a part of the investment criteria include the following:

- i. **Market/Interest Rate Risk:** The value of the Fund's portfolio may be affected by markets risks that are external and out of the Fund Manger's control. Some of these risks include volatility (risk) in interest rates. Interest rate risk is the risk of an unexpected change in interest rate affecting the value of an investment. A decline in interest rates resulting in a dip in the market value of the Fund while a rise in interest rates would surge in the market value of the Fund.
- ii. **Credit Risk:** This is the risk that an asset/security in which the Fund Manager may invest becomes unable to make returns as at when due. While the Fund Manager would only invest in grade investment securities, the fund manager offers no guarantee that the ratings of the issuer of the instrument will remain the same throughout the life of the Fund.
- iii. **Reinvestment Risk:** This is the risk that future Shariah-Compliant investments might be at a lower income/return in comparison to the prevailing return or that there may be no viable investment opportunity to re-invest the securities at maturity of the asset.
- iv. **FGN Obligations Risk:** FGN obligations are subject to low but varying degrees of credit risks and are still subject to interest rate and market risk. While Debt Management Office-issued obligations are backed by the "full faith and credit" of the FGN, securities issued by the government agencies or government-sponsored entities may not be backed by the full faith and credit of the FGN. If a government-sponsored entity is unable to meet its obligations or its creditworthiness declines, the performance of the Fund that holds

INFORMATION ON THE NORRENBARGER ISLAMIC FUND

securities issued or guaranteed by the entity will be adversely impacted.

- v. **Inflation Risk:** This is the risk that an increase in price levels will undermine the purchasing power of the Fund's value of investment and returns.
